

We have already reported our Intellectual Property Management Plan and state of implementation to the 7th meeting of the 10th Board on November 5, 2020.

One. Intellectual Property Management Plan

I. Intellectual Property Strategy:

Due to the needs of our business, besides emphasizing the protection of the intellectual property and trade secrets of customers based on our intellectual property strategy, we further set complying with the IP regulations of manufacturers, clarifying the ownership of IP rights, and protecting our own trademark rights and trade secrets as the principal goals of IP management.

II. Intellectual Property Management System:

We have established the “Regulations for Intellectual Property Rights Management” and “Regulations for Information Security Inspection Management” to implement IP management in terms of three aspects: document, people, and environment.

III. Potential Risks and Countermeasures:

We focus on the risk control of trade secret leakage. Based on our “Regulations for Information Security Inspection Management”, the major countermeasures are as follows: take immediate defensive action and implement reverse lookup, trace the intrusion address in collaboration with related units, and immediately report the status to the responsible personnel, and take corrective and preventive action to strengthen the protection of corporate trade secrets and IP rights.

Two. State of Implementation/Results

We are essentially a distributor reselling products and services for original manufacturers or providers to customers or system integrators. As we rarely engage in product or technology R&D, we have no patented products or technologies. In trademark rights, we have been awarded the rights to six trademarks in total so far.
